PostGuestbook

.. is a Guestbook module for PostNuke 0.71+.

why I started writing this module

- get a feeling for the usability of the PN-API
- no dedicated GuestBook module for Postnuke availiable

Features:

- uses PN API
- easy install/uninstall (PN-conform)
- different layouts (using smarty for different html templates)
- colors of PN-Theme are used by the default template
- user can submit Name, Location, Homepage, e-mail, and message
- up to five admin-defined Fields (html-templates have to be changed)
- ip and date/time of posting are always logged
- preview of posting
- Entries are paged, oldest last
- Number of Entries per Page in configurable
- Information of current PN- user (name, Homepage,...) are automatically inserted in new GuestBook Entry
- PN Permission System used
- admin can edit and delete a message
- ip of posting is shown to admins only
- notification of new GuestBook Entry
- Documentation (html and pdf)
- BBCODE => utility Modul*
- Encompoass compatible
- php themes for Safe Mode installations

wishlist:

- more (and better) translations
 - -> anybody want's to help?
- Smilies => utility Modul*
- Image Upload => utility Modul*
- configuration of admin-user defined fields
- format/validation of admin-user defined fields
- create icons
- new layouts (feel free to assist :-)
- show PN avatars (registered users only)
- * utility Modul
- a PN Modul has to be available to integrated this features.
